

CHEA PANHCHAKSELVUTH

CIRRICULUM VITAE

Address: Street, Sangkat: Ang Taminh, Khan: POR SENCHEY, Phnom Penh, Cambodia

Email: waisssss615@gmail.com, Telephone/Telegram: (+855) 89 346 615

PROFILE: I am a Software Engineering student with a strong interest in robotics and automation. Although I am a beginner with no professional experience in robotics, I have a solid foundation in programming, logical thinking, and problem-solving gained through my software engineering studies. I have basic knowledge of robotics fundamentals such as controllers, sensors, actuators, and control logic, and I am highly motivated to learn through hands-on training and real-world projects. I am a fast learner, adaptable, and eager to grow into a competent robotics and software engineer.

EDUCATION BACKGROUND

2025 – Present : **Bachelor Degree of Software Engineering**, BELTEI International University
2024 : **Highschool Diploma**, Kampong Spue High School
2021 : **Secondary School Diploma**, Kampong Spue Secondary School

SKILLS & COMPETENCE

- Programing & problem-solving fundamentals, - Analytical thinking, - fluent in both Khmer and English, - Basic understanding of Robotic concept, - Basic debugging and testing skills, - Fast learner, - Adaptable, - Good at Teamwork and communication skills

EXTRA-CIRRICULAR ACTIVITIES

2023 : **Clean Environment Event Participant — High School**

- Collaborated with a team to design and build a robotic prototype for environmental cleanup, capable of picking up trash from water surfaces (simulated lake/river) and learned basic robotics components, including sensors, actuators, and control logic

2024 : **STEM Event Participant — High School**

- Worked closely with a team to design and build a robotic car prototype for a high school STEM racing competition. Applied basic programming and control logic to ensure the car could follow the track and complete the race successfully. Gained hands-on experience in team collaboration, problem-solving, and technical troubleshooting. Successfully demonstrated the racing car during the STEM event, receiving feedback from teachers

2025 : **PRATICAL TRAINING — WINTECH SOFTWARE DEVELOPMENT**

- I gained hands-on experience in software development, including coding, testing, and debugging small-scale projects. Also Learned about system management, including organizing, maintaining, and monitoring software systems for smooth operation. Work with the team on project planning and task management

PUBLICATION & TECHNICAL CONTRIBUTIONS

- I have developed teamwork, task management, and problem-solving skills through both STEM projects and collaborative programming assignments.
- I can do Python, and am able to write scripts, automate simple tasks, and simulate basic robotics logic. I also have a basic understanding of C/C++ for embedded systems and microcontrollers, along with foundational skills in software development, debugging, and testing.
